PROFILE

I am an upcoming Junior Front-End Developer with a growing interest in UX design. I focus on building responsive, accessible, and user-friendly interfaces using modern web technologies, while developing design skills to bring both functionality and usability together. I am actively improving my knowledge of JavaScript, React.js, and design principles to contribute to projects that improve user experience and product performance. I am open to entry-level roles, internships, and collaborative opportunities in web development and UX design. My goal is to become a React Developer and join a team where I can contribute to real projects, learn from experienced developers, improve and create digital products.
